

Proposition 65

California's Proposition 65 lists all the chemicals known to the state to cause cancer or reproductive toxicity. We perform testing for the metals that appear on the list, such as arsenic (As), beryllium (Be), cadmium (Cd), chromium (Cr), lead (Pb), mercury (Hg), and nickel (Ni). We can also test for the phthalates included on the list: di-n-butyl phthalate (DBP), di(2-ethylhexyl) phthalate, di-n-hexyl phthalate (DnHP), di-isodecyl phthalate (DIDP), and butyl benzyl phthalate (BBP).
